User Command

Device Response

Display banner

- Retrieve metadata objects for the current time period and channel
- Assemble and display the banner:
 - form segment fields
 - display cursor in the current segment field
 - display program description in the banner
 - display segment description in the banner

Move cursor

- Display cursor in new segment field
- display segment description of new segment

Select

- Schedule a reminder for the segment on which the cursor is located

Record

- Display option to record whole program or segment only and receive selection
 - if viewer selects record whole program, begin recording and store any buffered portion
 - if viewer selects record segment and segment is current, begin recording
 - if viewer selects record segment and segment is future, schedule recording
 - if viewer selects record segment and segment is buffered, store segment as recorded content
